Customer Analytics Dashboard

Background

Our customer success team currently uses 4 different tools to track user behavior. They need a unified dashboard.

Vision

Build a great dashboard that shows everything about our customers in one place.

Goals

- Make CS team more efficient
- Improve customer satisfaction
- Reduce churn

Requirements

- Show monthly active users
- Show feature usage stats
- Show customer health scores
- Dashboard should be fast and beautiful
- Export to CSV

Considerations

- Should integrate with existing data pipeline
- Need to think about permissions - who can see what
- Consider what metrics matter most
- Maybe we can use an existing BI tool instead

Timeline

- Start: ASAP
- Launch: When it's ready
